

EDUCATION

- **IT University of Copenhagen** Copenhagen, Denmark
Master of Science in Computer Science
July 2024 – June 2026
 - Relevant coursework: Algorithms, Distributed Systems, Software Engineering, Databases
- **University of Copenhagen** Copenhagen, Denmark
Bachelor of Science in Computer Science
July 2021 – June 2024
- **University of Southern Denmark** Denmark
Elite Summer School - Robotics & Entrepreneurship (3-week intensive)
Aug. 2025

EXPERIENCE

- **DISCO-2 CubeSat Project** Copenhagen, Denmark
Embedded Systems Developer
Jan 2025 - Present
 - **Multi-Component Architecture:** Developed software for heterogeneous Cortex-A53/M7 system with clean interfaces between Linux application layer and low-power microcontroller.
 - **Custom Platform Development:** Built custom Linux distribution using Yocto/OpenEmbedded; configured kernel, device trees, and optimized rootfs.
 - **Image Processing Pipeline:** Implemented configurable multi-stage image processing pipeline with camera control interface for in-orbit analysis.
 - **Communication & Debugging:** Integrated protocol stack with packet fragmentation and error recovery; diagnosed cross-component issues using remote debugging.
- **PeopleNet A/S** Copenhagen, Denmark
Software Developer (Part-time)
Aug 2022 - Present
 - **Teams Provisioning System:** Built full-stack solution with SPFx React frontend and Azure Functions backend; automated Microsoft Teams creation via Graph API with configurable business rules.
 - **SharePoint Site Automation:** Developed self-service project site provisioning with custom permission handling, bypassing default SharePoint inheritance for client-specific access control requirements.
 - **Dynamics 365 CRM Integration:** Automated newsletter signup pipeline feeding directly into Dynamics 365, enabling sales team to quickly identify and contact potential leads.
 - **Enterprise Development:** Delivered SPFx solutions with TypeScript/React frontends integrated with Azure Functions, Microsoft Graph API, and Azure SQL backends.

PROJECTS

- **LEGO Quality Control System:** Computer vision system for automated scratch detection using AnomalyDINO; developed in collaboration with LEGO working with collaborative industrial robots.
- **Mesh Grid Networks (BSc Thesis):** Distributed mesh networking protocol implementation; analyzed routing algorithms and packet delivery in decentralized communication systems.

PUBLICATIONS

- **COPA2024, San Diego:** “Building Towards a Distributed, Dynamic Solution to the Santa Claus Problem” - Co-authored with David Marchant. Concurrent distributed systems with performance analysis.

TECHNICAL SKILLS

- **Languages:** C#, TypeScript, JavaScript, Python, C, C++, SQL
- **Cloud & Backend:** Azure Functions, Azure SQL, Microsoft Graph API, .NET, REST APIs
- **Frontend:** React, SharePoint Framework (SPFx)
- **Tools:** Git, Docker, VS Code, Azure DevOps, Make/CMake
- **Systems:** Linux, Embedded (ARM Cortex), Yocto/OpenEmbedded
- **Languages:** Danish (Native), English (Fluent), Arabic (Fluent)
